

AUTOMATIC SAFETY SLATTED COVERS

ABRIBLUE
Protect, enjoy!

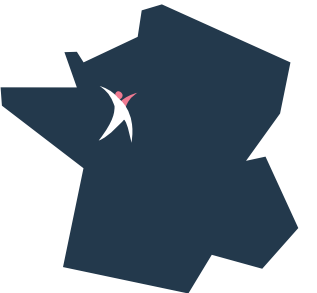

100% French know-how, something to make you smile!

Welcome to Abridblue... Your slatted safety cover specialist.

Since 1985, over 122,000 slatted covers designed and installed in France and 52 other countries. Every product is unique, custom made to the needs of every customer.

The 100 Abridblue team employees put their expertise at your service by their daily and long term commitment to your safety and comfort.

Why choose a slatted cover as a pool protection system?

- ✓ **PRACTICAL:** no physical handling, no time wasted storing and taking out a cover. And the pool stays clean thanks to the slatted cover's protection.
- ✓ **SECURE:** fitting your pool with an Abridblue slatted safety cover makes you compliant with the NF P 90-308 standard implemented with the French 1st January 2004 law.
- ✓ **ECOLOGICAL AND ECONOMIC:** they limit evaporation and maintain water temperature during the high season.
- ✓ **AESTHETIC:** the slatted covers discretely blend into your environment.

Imagine your pool fitted with an Abridblue cover: the stress has gone, a single gesture and your pool is silently secured. Your pool is protected. You have peace of mind.

Imagine your pool, dream of it and then..... create it!

For over 30 years, the Abriblue teams have been working to offer you quality, functional and aesthetic solutions that meet all safety requirements.

There is a reason behind the fact that the brand most often recommended by pool professionals and installers is Abriblue.

Abriblue controls every step in your project and is delighted to be able to design your ideal slatted safety cover.

Because purchasing an Abriblue cover combines peace of mind and aesthetics; Abriblue lets you give your pool style!

Protect, enjoy!

In France, safety covers for private pools are subject to the NF P90-308 standard.

This standard imposes rules covering the materials, the fastening system and the ageing criteria. It also lists installation-related obligations.

The only way to enjoy your pool in complete peace of mind.

With our covers, you benefit from the guarantees provided by an experienced, reliable and sustainable manufacturer that can provide the customer service and maintenance of your installation far into the future.

Day after day, your Abriblue safety cover will be your discrete, everyday partner, making your pool safe and giving you peace of mind.

An XXL offer

Abriblue has the most complete pool cover offer on the market...

Submerged, above-water, mobile, solar, connected... Abriblue has imagined all you need to create your personal outdoor space!

Whether for a new pool or an existing pool, our wide range will meet your technical constraints, your budget and your wishes.

☐ STATIC

☐ MOBILE

☐ SUBMERGED

☐ SOLAR

☐ CONNECTED

Blue water and a green conscience

Cover solutions are often chosen for safety, they are indeed a sure way to protect your family, especially children. However, there are many more important benefits that are good for your finances, your comfort and for the environment.

CONTROL HEAT LOSS

A little sensitive to cold? Good news! Your cover will help **fight heat loss**. During the day, the sun heats the cover and the pool water due to a transfer of the heat of the sun's rays. Covering your pool makes it possible to maintain the temperature at night.

The increase in water temperature will be even more spectacular if your slatted cover has polycarbonate slats.

Some of our models are even fitted with solar panels: which are very **economic** and fully **eco-responsible**.

SAVE WATER

Evaporation is one of the main causes of water and energy waste in a pool. 94% of heat loss in a pool is from the water surface, hence the obvious interest of a cover. The need to top up the water becomes less frequent.

Such a protection system also lets you anticipate using the pool from the very first fine spring days and to extend the fun late into the autumn. Building a pool is a genuine investment, so why not make it profitable!

USE LESS POOL CARE PRODUCTS

Abrible cover slats are specially designed to withstand UVs and the chemical agents in the water. This prevents photosynthesis, stops algae growth, keeps the pH more stable and lets you effectively protect your pool water. **This naturally reduces the need for chemicals**. It can even drop by 70%! Pool care products are expensive and are often harmful to the environment.

In addition to a **favourable economic and environmental impact**, your bathing experience will be much more pleasant.

In short, your Abrible cover has a positive effect on:

- **Energy consumption:** electricity (pool pump, heating, automatic treatment devices,...).
- **Consumed resources:** water (filter backwash discharge, evaporation,...).
- **The products consumed** (chlorine, pH plus or minus, algicide,...).

Finally, and we are proud of this, our production site **sorts and recycles** plastic (by type and colour), wood, aluminium, stainless steel, cardboard boxes, ordinary industrial waste via a leading French recycling scheme.

INNOV ATION

When your constraints inspire us...

The permanent quest for technical and practical solutions designed to offer users ever increasing comfort makes Abriblue covers unique and adaptable to almost all pools, from the simplest to the most complex, including the most extreme configurations.

“ I want to install a discrete submerged cover, but I’m afraid of corrosion related issues. Is there a solution?

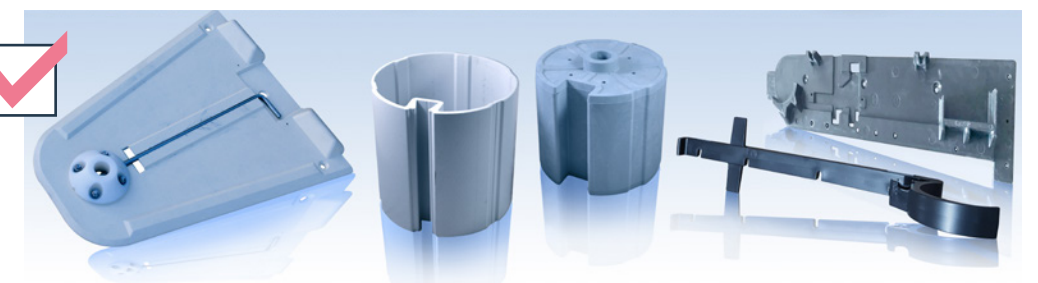

THE NON' CO GUARANTEE

Metal oxidation phenomena in a pool are exacerbated by several parameters:

- ✓ the presence of stray currents,
- ✓ too low pH,
- ✓ too high residual chlorine or bromide levels,
- ✓ prolonged and/or frequent excess water treatment product doses,
- ✓ too high temperature...

The very frequent corrosion of components on a submerged slatted safety cover can cause premature ageing or malfunctions in the long term.

Similarly to the hulls of boats, our flanges, shafts and sliders are made from composite materials. They do not suffer from corrosion and do not warp.

Abriblue has focused on researching special, high-tech materials, providing total resistance to corrosion without altering other attributes.

The result was the “Non’Co” corrosion guarantee which offers up to 15 years of peace of mind. It’s exclusive, reassuring, and only available from Abriblue!

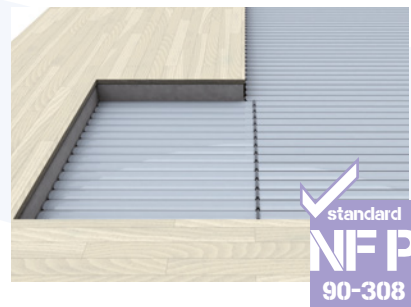

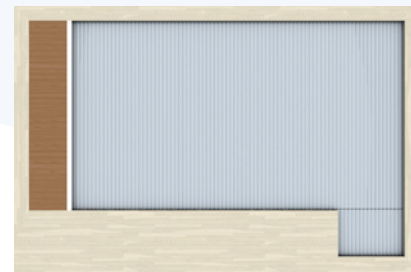

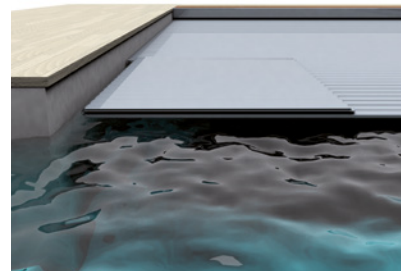

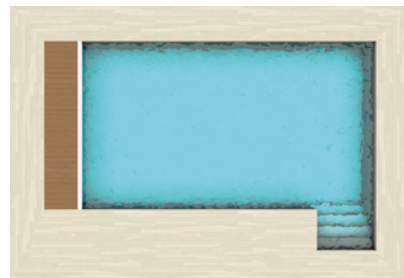

“How can you make the most of the benefits of a slatted safety cover on pools with a side surface area?”

WING SYSTEM®

The exclusive solution developed by Abrisblue to cover surfaces of the stair, deck, paddling pool type which can be made safe using this system.

The lateral surface to be covered may have a rectangular, roman, special or trapezoid shape. This system is available for 83 mm PVC slat covers.

Coupled to the slat cover using a hinge system, Wing System deploys using a basic rotating movement:

“Can a slatted safety cover be reconciled with salt electrolysis water treatment?”

Electrolysis is an excellent water treatment solution. Beware, however, of concentrations of oxidising agents when the pool is protected by a cover. If not properly regulated, the treatment can have very corrosive effects on materials known for their corrosion-proof properties (316L grade stainless steel, anodised aluminium) with a real risk of damage to the cover.

But the solution is here!

SLOW MODE

The Slow Mode system proposes coupling to your water treatment system for slatted cover position-based regulation. Simple, effective and reassuring.

“I want my cover to obey instantly, for total comfort.”

SMARTPHONE-CONTROLLED SLATTED COVER.

- ✓ **USING BLUETOOTH**, the slatted cover is controlled (either as standard or as an option) using a specific app with a control guide.
- ✓ **SECURE**, the control is locked by the phone's code. It is imperative to be in view of the pool when controlling the slatted cover, and contact must be maintained on the smartphone during closure. The slatted cover also has a key-operated control.
- ✓ **EASY**, pairing the slatted cover with the smartphone uses a code the first time control is taken and is then recognised automatically.

“My submerged cover is automatic, but if the locking system could secure itself on its own it would be even better.”

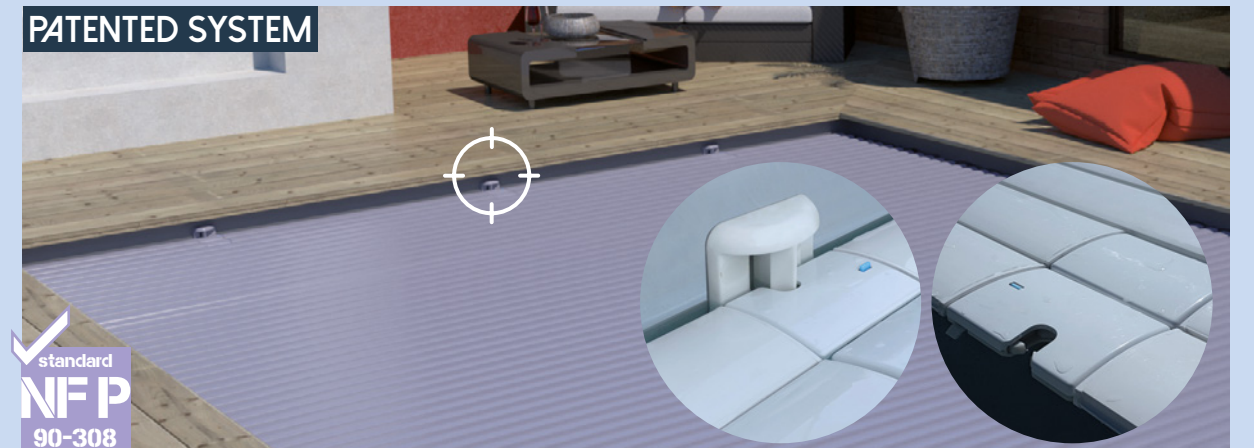

SELFEEEX, SAFETY WITH NO CONSTRAINTS OR COMPROMISES.

Selfeex is a mechanical and automatic locking system specific to IMM'Ax and IMM'Box submerged slatted covers.

Requires no manual operations, so there is no risk of forgetting or human error!

- ✓ **STAND-ALONE**, locking is automatic.
- ✓ Mechanical **STRENGTH** and corrosion resistance.
- ✓ **ADAPTABLE** to existing submerged slatted covers, at different positions on the width and variable water levels.
- ✓ **CUSTOMISABLE**, available in White, Sable, Blue, Light Grey and Galet Grey.

PATENTED SYSTEM

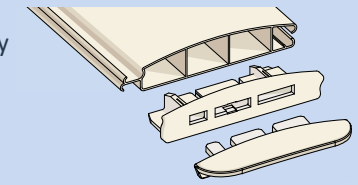

SLAT COVER

Customise your cover

SLAT FINISH

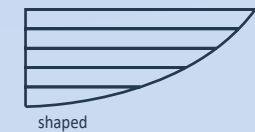

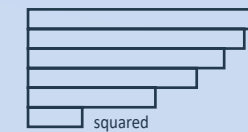

The plugs are fitted with removable wings, used to perfectly adapt to pool dimensions.

Our slatted covers are delivered with a set of wings equipped with guide wheels fitted on the first cover slat, thereby improving movement and limiting friction on the pool covering.

Optional brush wings:
They limit the passage of impurities into the pool and reduce the clearance between the brushes and the pool wall.

The slats can be cut square (standard finish), or shaped (depending on the slat type) to perfectly adapt to your pool shape.

“ I want to give my pool some style.

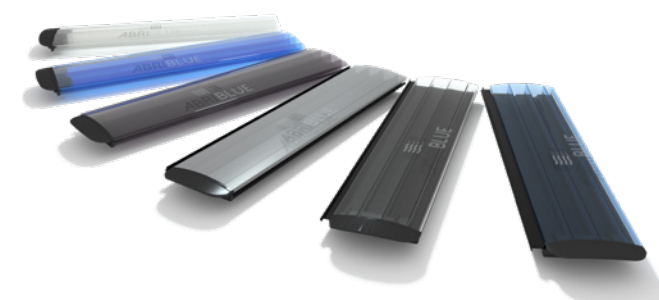

- ✓ 83 mm slats for excellent floatability thanks to the large volume of air they contain.
- ✓ Plug watertightness guaranteed by ultrasound welding technology.
- ✓ UV Treatment.

OPAQUE PVC SLATS

White, Sable, Blue, Light grey, Galet grey.
Limits evaporation and maintains water temperature.

POLYCARBONATE SLATS

Clear, Blue tinted translucent, Black Fumée, Two-ply Mother of pearl, Two-ply Clear/Black and Blue tinted two-ply.
Water heating power, adds from 6 to 8 degrees depending on the colour.
High resistance to extreme conditions (temperature and hail), 8 times stronger than a PVC slat.

“ I need to choose a fastening system compliant with the standard.

Safety attachments prevent the slat cover from being lifted and fix it to the pool structure when it is unrolled. They must always be locked, failing which safety is not provided and the pool is not compliant.

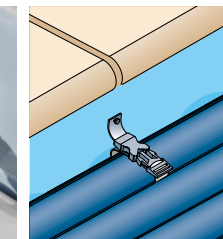

Abrible offers 4 solutions, including one automatic.

✓ Manual attachment systems:

ANTI-LIFTING BUCKLE

Attachment strap that can be fitted to all pool slatted covers.

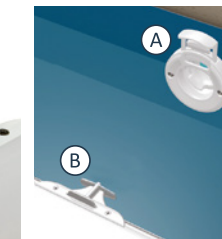

Colours: White, Sable, Light grey and Galet grey.

COVERLOCK SYSTEM

This system is composed of an ergonomic trigger (A) and a harpoon (B).

Colours: White, Sable, Light grey and Galet grey.

FEEX'O SYSTEM

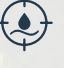

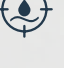

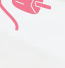

Only compatible with opaque PVC slats.
Colours: White, Sable and Light Grey.

✓ Mechanical and automatic locking system:

SELFEEX: This system locks on its own without any manual operations (presentation on p.11).
